

PROTECTING INTELLECTUAL PROPERTY

Protect the programs and systems that support what makes your organization successful and unique.

PROTECT YOURSELF AND YOUR COMPANY

- Do not store private information on any device that connects to the internet
- Use up-to-date security software tools
- Educate employees on spear phishing email tactics
- Establish protocols for quarantining suspicious email
- Ensure your employees are trained to avoid un-intended disclosures
- Remind employees of security policies on a regular basis
- Document employee education
- Ensure HR policies are in place that specifically enhance security

Common Hacking Methods

- Malware to your system or download information
- Network hacking
- Theft from unattended electronic devices
- Unauthorized entry
- Unusually probing questions
